

## Digital Image Resizing in CaptureOne

Under the **Process Recipes** (Gear Icon), make a new recipe (e.g. “VAP 1920x1080”).

Select JPEG as **Format**

**Quality** could be whatever you like. 97 gives a large reduction in file size with high quality. Use 92 if you need even smaller file size with no visible deterioration in image quality.

sRGB as the **ICC Profile**

Width x Height as **Scale**

With 1920 x 1080 px

Select an appropriate **Output Destination**.

**Process summary** gives you an estimate of your final image parameters.

Click **Process**.

You can use this Recipe from then on.

The **Open With** option can be set to None or to your favourite JPG image viewer to give you an instant view of your output file.
